

# MACHINE LEARNING

Q1 to Q12 have only one correct answer. Choose the correct option to answer your question.

**1. Which of the following is an application of clustering?**

- a. Biological network analysis
- b. Market trend prediction
- c. Topic modeling
- d. All of the above

**2. On which data type, we cannot perform cluster analysis?**

- a. Time series data
- b. Text data
- c. Multimedia data
- d. None

**3. Netflix's movie recommendation system uses-**

- a. Supervised learning
- b. Unsupervised learning
- c. Reinforcement learning and Unsupervised learning
- d. All of the above

**4. The final output of Hierarchical clustering is-**

- a. The number of cluster centroids
- b. The tree representing how close the data points are to each other
- c. A map defining the similar data points into individual groups
- d. All of the above

**5. Which of the step is not required for K-means clustering?**

- a. A distance metric
- b. Initial number of clusters
- c. Initial guess as to cluster centroids
- d. None

**6. Which of the following is wrong?**

- a. k-means clustering is a vector quantization method
- b. k-means clustering tries to group n observations into k clusters
- c. k-nearest neighbour is same as k-means
- d. None

**7. Which of the following metrics, do we have for finding dissimilarity between two clusters in hierarchical clustering?**

- i. Single-link
- ii. Complete-link

iii. Average-link

Options:

- a. 1 and 2
- b. 1 and 3
- c. 2 and 3
- d. 1, 2 and 3

## 8. Which of the following are true?

- i. Clustering analysis is negatively affected by multicollinearity of features
- ii. Clustering analysis is negatively affected by heteroscedasticity

Options:

- a. 1 only
- b. 2 only
- c. 1 and 2
- d. None of them

## 9. In the figure above, if you draw a horizontal line on y-axis for $y=2$ . What will be the number of clusters formed?

- a. 2
- b. 4
- c. 3
- d. 5

Answer:--2

## 10. For which of the following tasks might clustering be a suitable approach?

- a. Given sales data from a large number of products in a supermarket, estimate future sales for each of these products.
- b. Given a database of information about your users, automatically group them into different market segments.
- c. Predicting whether stock price of a company will increase tomorrow.
- d. Given historical weather records, predict if tomorrow's weather will be sunny or rainy

**11. Given, six points with the following attributes:**

point	x coordinate	y coordinate
p1	0.4005	0.5306
p2	0.2148	0.3854
p3	0.3457	0.3156
p4	0.2652	0.1875
p5	0.0789	0.4139
p6	0.4548	0.3022

**Table :** X-Y coordinates of six points.

	p1	p2	p3	p4	p5	p6
p1	0.0000	0.2357	0.2218	0.3688	0.3421	0.2347
p2	0.2357	0.0000	0.1483	0.2042	0.1388	0.2540
p3	0.2218	0.1483	0.0000	0.1513	0.2843	0.1100
p4	0.3688	0.2042	0.1513	0.0000	0.2932	0.2216
p5	0.3421	0.1388	0.2843	0.2932	0.0000	0.3921
p6	0.2347	0.2540	0.1100	0.2216	0.3921	0.0000

**Table :** Distance Matrix for Six Points

a.

b.

c.

d.

Answer:---1

**Q13 to Q14 are subjective answers type questions, Answers them in their own words briefly**

### **13. What is the importance of clustering?**

**Answer** :- Clustering is the important in the data analysis and data mining applications. It is the task of grouping a set of objects in the same group are more similar to each other than to those in other groups(clusters).

#### **Importance—**

1. Clustering is the significant component of machine learning.
2. Clustering has a wide range of applications.
3. it is also known as Exploratory data analysis technique, so it help to analysing the dataset.
4. it can find meaningful structure , explanatory underlying process , generative features and grouping inherent in a set of example.
5. It can extract the data when we work with huge datasets.
6. It can Organized the data.
7. it can cluster different customer type into one group based on different factors such as purchasing factor.
8. it show big impact on sales and customer satisfaction making it an invaluable tool to boost revenue, cut costs.
9. It is used in unsupervised learning .
10. It can increased performance, greater scalability , rapidly growing systems .

### **14. How can I improve my clustering performance?**

**Answer:-** Graph-based clustering performance can easily be improved by applying ICA blind source separation during the graph Laplacian embedding step. Applying unsupervised feature learning to input data using either RICA or SFT, improves clustering performance.
