MACHINE LEARNING

Q1 to Q11 have only one correct answer. Choose the correct option to answer your question.

1. Movie Recommendation systems are an example of:
 i) Classification
ii) Clustering
iii) Regression Options:

a) 2 Only
b) 1 and 2
c) 1 and 3
d) 2 and 3

Answer:----(d) 2 and 3

2. Sentiment Analysis is an example of:
i) Regression
ii) Classification
iii) Clustering
iv) Reinforcement Options:

 a) 1 Only
b) 1 and 2
c) 1 and 3
d) 1, 2 and 4

Answer:----(d) 1,2,4

3. Can decision trees be used for performing clustering?
 a) True
 b) False

Answer:--(a) True

4. Which of the following is the most appropriate strategy for data cleaning before performing clustering analysis,   given less than desirable number of data points:

i) Capping and flooring of variables
ii) Removal of outliers Options:

a) 1 only
b) 2 only
c) 1 and 2
d) None of the above

Answer:---(a) Capping and flooring of variables

5. What is the minimum no. of variables/ features required to perform clustering?
a) 0
b) 1
c) 2
d) 3

Answer:--(b) 1

6. For two runs of K-Mean clustering is it expected to get same clustering results?
a) Yes
b) No

Answer:--(b) NO

7. Is it possible that Assignment of observations to clusters does not change between successive iterations in K-Means?
a) Yes
b) No
c) Can't say
d) None of these

Answer:--(a) YES

8. Which of the following can act as possible termination conditions in K-Means?
 i) For a fixed number of iterations.
ii) Assignment of observations to clusters does not change between iterations. Except for cases with a bad local minimum.
iii) Centroids do not change between successive iterations.
iv) Terminate when RSS falls below a threshold. Options:

 a) 1, 3 and 4
b) 1, 2 and 3
c) 1, 2 and 4
d) All of the above

Answer:---(D) All of above

9. Which of the following algorithms is most sensitive to outliers?

a) K-means clustering algorithm
b) K-medians clustering algorithm
c) K-modes clustering algorithm
d) K-medoids clustering algorithm

Answer:--(a) K-means clustering algorithm

10. How can Clustering (Unsupervised Learning) be used to improve the accuracy of Linear Regression model (Supervised Learning):
i) Creating different models for different cluster groups.
ii) Creating an input feature for cluster ids as an ordinal variable.
iii) Creating an input feature for cluster centroids as a continuous variable.
iv) Creating an input feature for cluster size as a continuous variable. Options:

a) 1 only
b) 2 only
c) 3 and 4
d) All of the above

Answer:---(d) All of the above

11. What could be the possible reason(s) for producing two different dendrograms using agglomerative clustering algorithms for the same dataset?
a) Proximity function used
b) of data points used
c) of variables used
d) All of the above
Answer:--(d) All of the above

Q12 to Q14 are subjective answers type questions, Answers them in their own words briefly

12. Is K sensitive to outliers?

Answer:---- It is known that **k-means clustering is highly sensitive to the isolated points** (called outliers). Such outliers can significantly influence the final cluster configuration and should be removed to obtain quality solutions.

13. Why is K means better?

Answer:---- 1)**Relatively simple to implement.**

2)**Scales to large data sets.**

3)**Guarantees convergence.**

4)**Can warm-start the positions of centroids.**

5)**Easily adapts to new examples.**

6)**Generalizes to clusters of different shapes and sizes, such as elliptical clusters.**

14. Is K means a deterministic algorithm?

Answer:---No it is not deterministic Algorithm. This **non-deterministic** nature of algorithms such as the K-Means clustering algorithm limits their applicability in areas such as cancer subtype prediction using gene expression data. It is hard to sensibly compare the results of such algorithms with those of other algorithms
